Fig. e

Fig. f

1. The clear silicone gasket and orange gasket can be removed if they need to be cleaned (see **Fig. a**). Do not use sharp tools to remove the gaskets. Sharp tools can damage the gaskets.
2. Clean the gaskets (see **Fig. b**) with warm, soapy water. Dry the gaskets before reassembling the containers.
3. Insert the orange gasket in the top of the container's lid.
4. Use your hands to press the clear gasket into the groove on the lid. Note the orientation of the clear gasket (see **Fig. e**). Ensure that the clear gasket remains flat while attaching it to the lid. Do not twist the clear gasket while reassembling the container.
5. Ensure that the container has been reassembled correctly before use. If the gaskets have not been reattached properly, vacuum sealing the containers might not be possible.
